MALCON MARINE AND LAND CONSTRUCTION

Rect-to-round transition LORU

Description

Rect-to-round transition are used between rectangular and circular ducts. The rectangular connection has joining profiles type RJFP and the circular connection has Safe seal. The rectangular connection is available with offsets as in the coded sketches.

Measures e and h only need to be given for alternative 6. Negative values for e, for example, mean that e is outside side a.

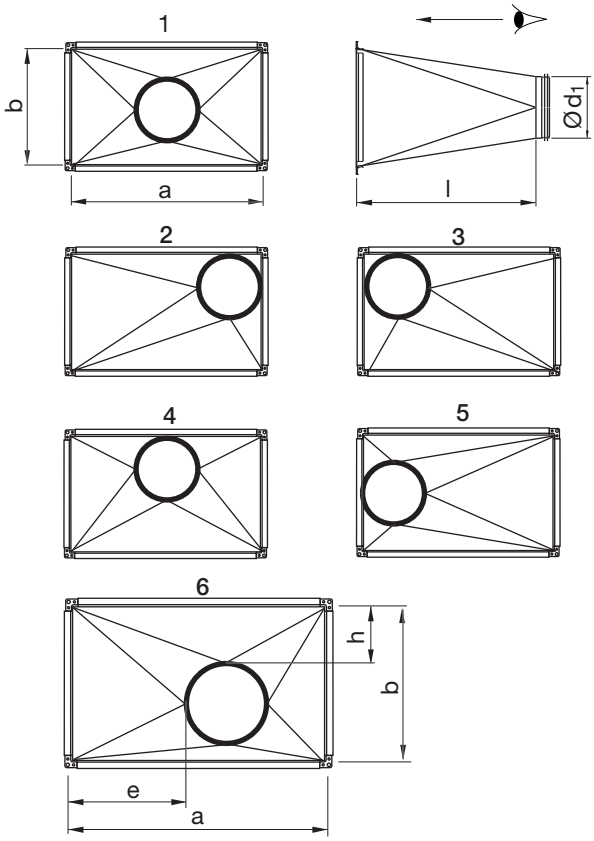

The Rect-to-round transition LORU can also be manufactured with other designs of the circular connection. It then changes name as follows:

LORNP: Transition with male coupling (without gasket)
LORMF: Transition with female coupling
LORFL: Transition with flange coupling

Ordering example

LORU	500	300	160	450	1	.....	.....
Product							
Largest side	a						
Smallest side		b					
Diameter			Ød$_1$				
Length				l			
The alternative displacements are seen from the circular end					1 – 6		
Displacement						e	(Only at alternative 6.)
Displacement							h (Only at alternative 6.)
